

PRODUCT INFORMATION

G A S K E T S A N D O R I N G S

Our moulded O rings and gaskets at Cellular Developments are produced in a wide variety of polymers to suit all applications. Our in-house tooling facility can produce multi-cavity tooling for moulded O rings, or we can offer extruded and joined rings.

We can produce prototype tooling for more complex gaskets and develop solid or sponge rubber formulations to best suit your requirements before bulk production. Using compression or Injection moulding techniques, and with our technical experience, we can ensure that all our products meet our Quality Standard to BS EN ISO 9001-2000.
